Credential details	Issuer	Date
Advanced Back-End Specialization	Coding Temple	Issued 06/10/2026

This credential earner completed the Backend Specialization - Preparing and Publishing APIs module as part of Coding Temple’s Software Engineering Bootcamp. The individual has demonstrated the ability to build, test, document, and deploy scalable APIs using professional development practices. In this module, the learner applied test-driven development (TDD) principles, wrote advanced unit tests, and created clear API documentation. They also gained hands-on experience with CI/CD pipelines and deployed their APIs using cloud platforms and GitHub Actions—equipping them with the tools and workflows needed for real-world software engineering environments.

Recipient Brian Wilkinson
UUID 3caad27b-1291-40e7-97bb-7e1371385173

Back-End Specialization Foundations	Coding Temple	Issued 06/09/2026
--	---------------	----------------------

This credential earner completed the Backend Specialization - Project Planning and Database Design module as part of Coding Temple’s Software Engineering Bootcamp. The individual has demonstrated foundational back-end engineering skills through hands-on experience in database design, API development, and authentication. In this module, the learner planned and modeled databases using ERDs, implemented SQLAlchemy for ORM-based interaction, and built RESTful APIs using Flask. They applied advanced querying techniques, integrated token-based authentication, and followed best practices for rate limiting, caching, and scalable API architecture—laying a strong foundation for robust back-end systems.

Recipient Brian Wilkinson
UUID 6d803b75-31df-4a8f-b195-16a68c7ad5ab

Advanced Front-End Specialization	Coding Temple	Issued 06/08/2026
--	---------------	----------------------

This credential earner completed the Frontend Specialization - Module 2: Firebase | React Testing | CI/CD module as part of Coding Temple’s Software Engineering Bootcamp. The individual has demonstrated advanced proficiency in front-end development by building real-time, secure applications and implementing professional-grade testing and deployment workflows. Through this module, the learner worked with Firebase for authentication and real-time databases, tested React applications for quality assurance, and implemented CI/CD pipelines using GitHub Actions. They also explored AI-powered testing tools to streamline debugging and boost code reliability—equipping them with the skills needed to contribute to modern, production-ready front-end systems.

Recipient Brian Wilkinson
UUID 06f1e261-bd87-453a-943e-4f92ff0ae053

Front-End Specialization Foundations	Coding Temple	Issued 06/07/2026
---	---------------	----------------------

This credential earner completed the Frontend Specialization - Module 1: React with Typescript | Redux| Auth0 module as part of Coding Temple’s Software Engineering Bootcamp. The individual developed advanced front-end skills using modern technologies such as React, TypeScript, Redux, and React Query—along with best practices for scalable and maintainable front-end architecture. Learners gained hands-on experience with typed components, state management using Redux Toolkit, authentication flows with Auth0, and context-based design patterns using custom hooks. This module also introduced AI tools for enhanced code assistance, debugging, and productivity—preparing the earner to build robust, enterprise-level

front-end applications. Recipient Brian Wilkinson UUID 140b5f51-62ff-420d-80a3-90385c40835f		
Relational Databases and REST API Development This credential earner completed the Relational Databases and REST API Development module as part of Coding Temple’s Software Engineering Bootcamp. The individual has demonstrated proficiency in writing SQL queries to interact with relational databases and integrating SQL within Python applications. They have gained hands-on experience in building and exposing RESTful APIs using Flask, as well as managing database interactions through Object-Relational Mapping (ORM) techniques. The earner possesses a strong foundation in database management and API development for modern web applications. Recipient Brian Wilkinson UUID 21eca85d-fdaf-476f-85f2-b1cc2f90a344	Coding Temple	Issued 05/19/2026
Advanced Python This credential earner completed the Advanced Python module as part of Coding Temple’s Software Engineering program. Developed expertise in advanced Python data structures, including sets, tuples, and dictionaries, as well as regular expressions for pattern matching. Gained proficiency in file handling techniques for reading and writing data. Demonstrated a strong understanding of Object-Oriented Programming (OOP) fundamentals, applying key principles such as encapsulation, inheritance, and polymorphism to build scalable and maintainable applications. Recipient Brian Wilkinson UUID fb0c04b1-aa62-40bc-91ca-22feddb3db14	Coding Temple	Issued 04/28/2026
Python Foundations for Software Engineering This credential earner completed the Intro to Python module as part of Coding Temple’s Software Engineering Bootcamp. The individual has demonstrated proficiency in advanced Python programming concepts, including the use of data structures such as sets, tuples, and dictionaries, as well as regular expressions for pattern matching. They have applied Object-Oriented Programming (OOP) principles such as inheritance, encapsulation, and polymorphism to build efficient, reusable code. The earner also gained experience in file handling and received an introduction to algorithms and data structures, enhancing their problem-solving skills and code optimization capabilities. Recipient Brian Wilkinson UUID f9c8ba5f-0c27-46e0-ae95-511ddff80228	Coding Temple	Issued 03/20/2026
Single Page Apps with React This credential earner completed the React module as part of Coding Temple’s Software Engineering Bootcamp. Demonstrated proficiency in building dynamic single-page applications (SPAs) using React. The individual possesses a strong understanding of React component lifecycles and state management, along with experience in implementing seamless navigation using React Router. Skilled in integrating Bootstrap for responsive design and managing forms and user inputs within React applications. Recipient Brian Wilkinson UUID 34ad404a-79df-40e9-b8ec-747a3b301d72	Coding Temple	Issued 02/17/2026
Web Development with HTML & CSS This credential earner completed the HTML & CSS module as part of Coding Temple’s Software Engineering bootcamp. The individual has demonstrated proficiency in building structured web pages using HTML and styling them with CSS, along with skills in creating responsive layouts,	Coding Temple	Issued 01/26/2026

designing user-friendly forms, and applying foundational UI/UX principles to enhance web interfaces. The earner also has experience in prototyping and implementing design principles to create engaging and accessible web experiences. Recipient Brian Wilkinson UUID 6c4891fc-e980-4060-b181-dfd8d3627f3e		
JavaScript Mastery This credential earner completed the <i>JavaScript from Zero to Mastery</i> module as part of Coding Temple's Software Engineering Bootcamp. The individual demonstrated a strong command of both foundational and advanced JavaScript concepts, progressing from basic syntax and control structures—such as variables, arrays, loops, conditionals, and functions—to writing clean, efficient, and modular code suitable for production environments. Throughout the module, the learner gained a deep understanding of how JavaScript works under the hood, including the event loop, call stack, and execution context. They learned how the browser executes JavaScript and how to effectively leverage the Browser Object Model (BOM) and key Web APIs, including the DOM API, CSSOM, Fetch API, and other asynchronous capabilities. They can confidently write asynchronous code using callbacks, promises, and <code>async/await</code> syntax, and understand how JavaScript interacts with the browser environment to create responsive, interactive user experiences. This foundation enables them to build dynamic, full-stack applications that communicate seamlessly with back-end services and external APIs. Recipient Brian Wilkinson UUID 8eeff0b2-4516-4b24-bd01-a28a829ae74d	Coding Temple	Issued 01/20/2026
